Colori Birds

Circa: 2007

2007

Finland

Glass

16.5 x 0 x 10.5 cm (6¹/₄ x 0 inches)

As their name implies, Colori Birds delight us with their multitude of sophisticated colours. The diaphanous inner part of the bird draws in light, which is then reflected in the full spectrum of colours. Colori birds are symmetrical and well defined in form. In shape the body and the head replicate each other exactly; they differ in scale only. It is easy to imagine these sleek, playful torpedoes darting on the surface of the water.
