Monette Larsen (Solrød, Denmark 1984 -)

Still Drift

Cast Glass

20.5 x 38 x 25 cm (8 1/4 x 15 x 9 7/8 inches)

'Still Drift' is a unique cast glass sculpture by the Danish artist, Monette Larsen.

Larsen has always been fascinated by the concept of beauty within nature; what makes something beautiful and the characteristics that define it as such. Her work aims to examine the idea that what we perceive as striking and attractive in nature, is linked to our conscious and unconscious recognition of the inherent patterns and structures that are present.

In the artist's own words;

“My current work is influenced by the underlying structures of corals, their shape, growth and movement in the sea. In my sculptural pieces I explore the mathematics of the coral shape, known as a hyperbolic plane, I create shapes that grow into its own during the process. I add layers of complexity through the making process by refining and altering the piece like the forces of nature alters the perfect model in the natural world”

The artist can also create pieces to commission, please contact the gallery for further information.

Artist description:

Larsen has always been fascinated by the concept of beauty within nature; what makes something beautiful and the characteristics that define it as such. Her work aims to examine the idea that what we perceive as striking and attractive in nature, is linked to our conscious and unconscious recognition of the inherent patterns and structures that are present.

Drawing on the wonders in the living world, Larsen looks at the molecular structure of her subject matter to form the initial foundations for her work; the nanoscale and mathematics which are discovered from close observation. Each of her artworks are intended to be a reflection of this living world, a reminder of the splendour of what surrounds us, with the hope that also, the viewer creates links to their own experiences.

In the artist's own words;

“My current work is influenced by the underlying structures of corals, their shape, growth and movement in the sea. In my sculptural pieces, I explore the mathematics of the coral shape, known as a hyperbolic plane, I create shapes that grow into its own during the process. I add layers of complexity through the making process by refining and altering the piece like the forces of nature alters the perfect model in the natural world”

Larsen has exhibited extensively throughout Europe and the UK. She has artworks in the permanent collections of the Imagine Museum, St Petersburg, Florida, USA and the National Glass Centre, Sunderland, UK.
